May 8, 1904.

Any dran Mr. Collins,

Drank you for The copy of your intices in Bry ologist. I am glad you have gotten hold of The European Citerature on The only set. I have finished working over your opplagna and shall and them back as soon as possible The present week. I have labelled them in the light of The Sphagna Bor- aues, the descriptions of Warming The yolater of Brait waite, ste, following Wandy so for an openies are concerned, Though I coult see much in many of his varietal distinctions. The color ones som of no values and I think Roll is vight in throwing the out or reducing them to a category subordinate to varisty and Jam. I don't make much and of S. affire. It somes to be S. in hication without the combifichils and runs completely into the plainty from so understand by Braithwaite and others I am very much obliged for the use of the species when I have disagreed with previous eletermination I har generally marily placed bit of paper beneath the label mith man for comment. Licers Eng Condend.

Dartmonth College Hanover, n. 14. May 7, 1905.

My dran Mr. Collins, about that lest of spragna, I have looked over a pretty extusive range of specimens, have gotten through The major part of the Eaton Her Barium. I Expect to trave for Europs in The early summer for a clay of a year or two. If possible I adon't like to get The check tist ready Erfore I go. I think I can finish The examination of specimes, With " Ference to the reported localities) wonder if you can furnish me your card-lasts, or if you would care to

It is a copy of The list as I have

it at pront. Do not put yours fout it is it will be a let of trouble. I should also like to est you about the states of the following member of the Unicases creek ted to Whale I okand ly the Wishing you all from in the the missis. The bysophytic colliction you much have had. I have gother bogstern a very little material in this region. occasion to call upon Warmstorf and Jours, him a very selight fut old man. His last work, on the of they has trues to cast discredit upon Sman pick up a franking in norway. Brunt tit brit som som at the Kerbaria i Cambridge. Amule deputes & Unter mus & Unter divice & Aportia Caracteries, Gardinas. I had from tempted toward Decker of the The rank mucher of varietal from which had Them should be expected to occur in the state. I saw the photographs you look you your last enried you White in general took summer I Took Iny since of, a. Le Roy andrews.

Notes to Sphagnum Eist -The above list is Gased essentially upon The Catest treatment of Waruston & (Kryptogamen & Cora des Mark Branden burg und augung suder Gibists Bd. I, Liber - und Torfmoore, von C. Warnstorf, Leipzig. 1903. Sphagna Ss. 292 - 467 | which considers The Sphagna of The Surope. Marty all of the the sphage of reprise are common to Europe. This secut work differs from Warnstorg's Earlier treatment of North american forms (Contributions to the Knowledge of North amsican Sphagua, Bot. Saz. Vol. 15, 1890, pp. 127-40, 189-95, 217-27, 242-55 , with later scalland descriptions collected in Barnes and Heald's Keep, in the fact that several forms there treated as varisties have been elevated to specific rank. In the treatment of species I have differed in the Following faints: S. subtricator Hamps (S. intermediam Rosas., S. certales C. Jens.) I have not been will to satisfactority of parate from the forms of S. cymbifolium - It is placed between This reperies and I papillosum, Laving walls of hyaline cells of Granch Econes smooth as in S. cymbifoling but differing slightly in shape and position of extorephyllone cells, a matty however of considerable variatility in this groupes Poll has pointed out. I have seen New England specimens refused to it. S. farvifolium (Soudt.) Warnet. I have retained in its former flace as variety of S. recurren. S. Toneyanne Sell, and its varisty migustonsuse I have in the same way retained with S. cuspidation. With reference to the varieties, which have been named in such rumbers in this grows, I have included such as appear to show a disturch and readity recognized variations & tendency, upon which various authors show general agrisment. In so doing I have omitted ranisties Essed upon the presence of greater or less amount of coloring pigment, relative Alandroners or compact news of the plant, direction of the transhes

and other characters possibly explainable as due to immediate environment of the plants, calling for an arbitrary delimitation and of questionable systematic value. In case a species has been exhausted by varieties so that no form appears to remain under the head of the opening as in S. imbricatum, I have omitted the variety corresponding in the the original conception of the opsiers, in this case was cristatum warned. In the same way I have included was mucronatum Russ. with its species S. recurrence.

If the list imphasizes the fact that the New England sprices, or for that matter, the american sprices of 8 phagua are in need of extinsive collection and study, it will have served it, purpose. a very little collecting in Dismont should serve to fill many gaps in the list, while the same is two in handly less deque of the other states. Especially do the gurstionable aquatic forms need attention. The status of the opening, reprisely in the subscende group, can hardly be regarded as settled, and demands the

In addition to the opscies included in the list the following Europeans forms may be tooked for in Mrw England with a prospect of Duccers: S. Augstroemin's Harton, a very distinct officies of high latitudes may possibly be found in the mountains of the three northern states. It has recently been discovered in Aminica, a opeciment hindry communicated by Herr Warnstoof Ecaning the label, Hunter Cissk, Yukon I. Macann, '02.

From the curpitate group the following are to be noted:

S. monocladum (v. Klinggr.) Warnot, S. Trinitanse C. Mill. (known also from Florida), S. Fallax v. Klinggr., S. obtusum aunst S. and the curpitates. S. Schultz: Warnot, S. Tryp noides (a. Braun) Brush; From the acutifolia group S. subtile (Russ.) Warnot.;

from the subsecunda group S. crassicladum Warnet., S. turgidulum Warnet. Furthermore several species of Son southern United States range occurring as far north as How Jusey, mostly members of the eymber folia and subscenda groups, may be sought in the coast-region of Connecticut and Rhade I stand. The specific value of most of The Catter signingation can interpret hardly by differenced without more With reference to the record of localities, specimen from which - springs were not sin m. J. F. Collins has very kindly waringed the local lists and the - signs in the list are to be accredited to him.

Bulin.

19 Jan. 1910.

Mr. A. LeRoy Andrews, 508 University Ave. IThaca, N. Y.

My dear Mr. Andrews: -

your latter of a month ago, not the least of which has the fact that I have been very busy, and also the "grip,e".

First I wish to thank you for the regrint of the Bryologist article which I have just received.

In your letter you speak of some fruiting Sphagnum macrophyllum that an suggested to have collected. I don't know what you mean, as I have rever, so far as I can recall, collected that species in fruit.

During your absence in Europe I sent quite a number of my phagna to Tarnsterf, at his special request, but from several appearances he has mixed labels so that I am still uncertain about some of those sent to him. I still have a good many that are unwared, and I rhad he only too glad to have you look the cover, and even those that T. has named, if you wish. I say sond the in small packets, as I happen seroes then, unless you prefer to have the whole at once.

Addendum to your former Uphermus list in Madena, following the custom of others were best electronallished fiets. That would be very nice I think, if you have on uph for such or ordicle.

From, for the disag-list then a light technique of or some of a constated.

508 mirrorty are. Three, n.y. Jan. 23, 1910.

Dear Dr. Andrews:

phyllum from Maine that I possess. It was growing amongst a lot of other Sphagna, and it was not noticed until I begun to overhaul the material to dry it. It was collected, as I recall it now, while on a sort of picnic trip where most of the collecteing had to be done by grabbing a quantity of stuff and rushing on so as not to delay the party. I have never been back to the place since.

When you return it please send it by first class mail as that is about the only kind that seems to come through on time during the Christmas rush.

Very truly yours,

DEAR SIR:

The coming 18th day of November marks Dr. Asa Gray's seventy-fifth birthday. It seems a fitting time for the botanists of North America to join in some token of their esteem and good wishes for one who has done so much towards the study and classification of the flowering plants and the general advancement of the botany of this country. Many memorials have been presented to Dr. Gray but most of them have come from near and personal friends. The idea of this one originates with those further away.

It is not decided what form this memorial will take, and we should be glad to receive any suggestions. The intrinsic value of it will, of course, be of least account in the eyes of the recipient; its value will depend chiefly upon the number who unite in the offering.

Will you join with other botanists in sending such a token to Dr. Gray? If so, send at once whatever you wish to contribute — 25c., 5oc., \$1, \$5, any sum you please — to Charles R. Barnes, 14 Buckingham St., Cambridge, Mass., who will return receipt if desired. Please also enclose your card with some sentiment suitable to the day inscribed thereon. This will accompany the gift.

In order that this matter may not reach the public prints be kind enough to say nothing about it.

The time is very short; will you give this your immediate attention and make a reply of some kind?

Sincerely yours,

J. C. ARTHUR, C. R. BARNES, J. M. COULTER.

Cambridge, Mass. Oct. 19-Déar Ais:- Your note with eu-closure rec's. Thanks you to OsciBarnes

Johnson Collins Collins
19 Carroll chi.

19 Carroll ch. S.

(58 07. 2)

The self-appointed committee who undertook the collection of funds for a birthday token to Dr. Asa Gray, desire to report their action.

Circulars were sent to all botanists whose addresses we could obtain in the very limited time at our command. Doubtless many were omitted who would have been glad to contribute. All such omissions must be ascribed to the absolute necessity for haste.

By the 31st of October the number of replies received, and the amount contributed, seemed to indicate that about \$300.00 would be in hand before the 18th of November. Accordingly Messrs. Bigelow, Kennard & Co. of Boston, were asked to prepare a design for a vase of solid silver, with appropriate floral decoration, whose cost should not exceed \$300. The design was submitted on Nov. 3, and after consultation with as many as possible at Cambridge, was accepted with slight modifications. The vase with its pedestal was completed Tuesday night and presented without formality on Wednesday morning, the 18th inst. The cards which accompanied the subscriptions were placed on a silver tray and presented as the greetings of those who embodied their good will in the vase.

A full description of the vase, with illustrations of both sides, will be published in the December number of the BOTANICAL GAZETTE, a copy of which will be sent to you. The January number will contain a portrait and biographical sketch of Dr. Gray, together with some of the poems, congratulatory addresses, etc., which were sent on his birthday. Orders for this number (20c. per copy) should be sent early to John M. Coulter, Crawfordsville, Indiana.

Receipts and expenditures have been as follows:

| By 180 cash subscriptions | \$338. |
|------------------------------------|---------|
| To printing, postage and envelopes | \$ 6.95 |
| To discount on Canadian money | .04 |
| To car fare, six special trips | .60 |
| - | 325.00 |
| To printing, postage and envelopes | 5.41 |
| - | |
| | \$338. |

J. C. ARTHUR, C. R. BARNES, J. M. COULTER.

The Botanical Gazelte. JOHN M. COULTER, WABASH COLLEGE, CRAWFORDSVILLE, IND. CHARLES R. BARNES, PURDUE UNIVERSITY, LAFAYETTE, IND. J. C. ARTHUR, AGRIC. EXPER. STATION, GENEVA, N. Y. Cambridge, Mass_ June 7. 1886. My dear Sir: - I shall be glad to name your mosses for you of you will send me numbered duplicates, taking care that the Specimens you send really correspond to the ones you retain: otherwise you will be confused by the naming -Very Truly yours, CRBarnes You any assistance I can in studying the mosses-

help you in their determination. Do not send The Bolanical Gazette. any more specimens here EDITORS: as I leave on the 29th for JOHN M. COULTER,
WABASH COLLEGE, CHAWFORDSVILLE, IND. Tapayette - Ishall be on the wing until Aug 25. - Shall I not meet you at the A.A.A.S. CHARLES R. BARNES,
PURDUE UNIVERSITY, LAFAYETTE, IND. J. C. ARTHUR,
AGRIC. EXPER. STATION, GENEVA, N. Y. at Buffalo, Aug. 17? Cambridge, Maxx-Truly yours CRBarnes June 17. 1886. Dear Sir: - Your letter and package of mosses came duly to hand. ex looked them over yesterday afternoone The list is as follows:-1. Taypuum sp? 2. Bryum (Webern) nutaus. 3. Ulota crispa. 4. Polytrichum commune. 5. Tetraphis pellucida - (in fine condition) 6. Aypnum Sp? (Too young-) 7. Diphyseium foliosum -8. Ulota Hutchinsiae. 9. Unium affine. 11. Dicranum Acoparium_ Your determinations were right except in the case of 123. Not I and 6 I shall not attempt to name now I hope some day to give this genus a thorough overhauling and should be flad of all the species you can get hold of -

N-5 is specially fine because of the presence of calyptrae, which are usually gone from herb. Specimens. When you send other specimens number them consecutively with these please: then I can refer to any of your opecimens by number at any time -Respecting your inquiries: your method of collecting is as good if hurried in field-work there is probability of slighting the preparation of specimens-Whatever you do, don't do that! I think no better advice can be given than Limprichts in Die Laubmoose" - Dammle reichlich! Traparine sauber!" That tol lowed insures good, clean, characteristic Specimens, and plenty of them - When your time in the field is limited you will find it advantageous to drop your specimens into cornucopias of stiffish paper and do the washing, and arranging athome. Thus wrapped they can be carried in a basketor Knapsack or bucket or vasculum or augthing! My only criticism as to your specimens is that while good some were rather scanty. When you have plenty send liberal speci-mens to exchangers I shall expect much from your Maine trip twould be glad to

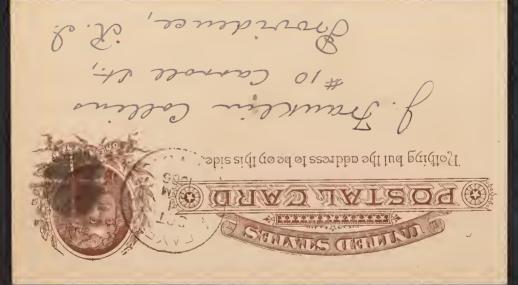

S. Sir: - I should advise you to put your money first into Miller's Synopsis Muscorum (1857, Latin) who contains de-Scriptions of many of our mosser - admirable descr-, too - This wir supplement the L. +). better than Sullivant - Keepa lookout for the latter tyou'll prekit up for less than 400 somewhere. You can get Suller from Friedläuder + Solin, Berlin_ Index is about ready to send out

PURDUE UNIVERSITY,

Dept. 20. 1886. My dear Mr. Collins:-Your letter and pkg are both received as soon as possible, l.E., as soon as the pressure of the beginning of a new years of coclege work has eased Mary thanks for the specimens.
Most sincerely you.
Company

J. Franklin Collins, 10 Carroll st., Providence, R.I.

My dear sir: --

I fear that you have ere this given up all hope of hearing from me regarding the mosses you sent me long ago for naming. I looked over about half of them last summer, and was then compelled to defer the study of the rest by the receipt of more urgent collections. A few days ago I finished all but some of the Hypna. Now I em to devote all my spare time to elaborating a collection by Dr. Roll along the line of the Northern Pacific for the herbarium of the National (German) School of Forestry at Zoschen. As this work will take several months I will not delay sending the names of those I have determined, and returning specimens of those which I have not yet examined.

The Botanical Gazette: A Monthly Journal of Botany: Edited and published by John Merle Coulter, Lake Forest University, Lake Forest, Illinois; Charles Reid Barnes, University of Ulisconsin, Madison, Ulisconsin; and Joseph Charles Arthur, Purdue University, Lafayette, Indiana. + + Established 1875. + + Subscription \$3.00 a year.

OFFICE OF PUBLICATION, 616 LAKE ST., MADISON, WIS.

March 2.1895.

Mr.J.F.Collins, Providence, R.I.

My dear sir:-- I find your letter awaiting me after a brief absence. In reply I have to say that the price of Husnot's Muscologia Gallica is 5 fr.per livraison. As there are 14 of these parts the total cost is 70 fr. (See Bot.Gaz.20:85. 1895.) Whether there is any reduction when all are bought at once I am not able to say.

The only journal devoted exclusively to the mosses is Musnot's Revue Bryologique, most of the articles in which are printed in French though occasionally one in English appears. I am not aware that there is any English journal exists in which more than an occasional article on mosses appears (as in the Bot.Gaz.). Hedwigia is devoted to the cryptogams in general and has most of the moss literature appearing in German journals, though occasional papers appear in the other general periodicals. Revue Bryologique is published by Th. Musnot, Cahan, par Athis, Orne, France at 5 fr. (Ithink) per year. Hedwigia is pub. at 12 marks, but the publisher's address is not at hand, though I can get it for you readily enough if you want it. Each is bi-monthly, the Revue containing about 100 pages annually, hedwigia about 5005.

Yours very truly,

! DRBarnes

Cerkus Hall 60 Cambridge Mass. Cear Onof. ballins; sending for determination a full set of the Bryophyles of the Wellman Arche Expedition! Do not jump out of your shoes, however, for There are only four specimens. Now of. you do not recognize The things at once, just

to the state of th hely remedy

let me know the genera, for the satisfaction of the collector. I would not hunk of bothering you with such four specimens except for The rather unusual locally from which They come. Tater on I sam going to send you my Fa. mosses - also a

I am ever so much obliged for your thoughtfulness in sending we the names of the phagna. How does
it happen that Ers. Britton sent the Sphagna to Europe to
be determined? I thought she was set agin sich things".
I am very glad to get the names as I think it would have
been a long time before I should have had the courage
to tachle them, if ever.

I have not done anything with the mosses this fall;

I have been so busy with college work that I have had no time for anything else so far. I hope to have more time after Christmas. Your "Air ship expedition" mosses have been lying on my desk all this time. Some day I shall get at them so as to be able to clear off my desk. The latter has nearly reached that stage where I have to clear it off in order to find room to work. Then you will hear from me in regard to them.

I shall be very glad to have the Georgia mosses sometime. They will be all the more valuable if named by Warnstorf.

Cordially yours,

for the Oflanguresch under way. Mith bust regards, IHHBartled

Cerkins Hall 60 Combridge Mass. Dear Mr. Gollins my domitory was in such an uproar over the prospect of a defeat at the hands (or feed) of Yale, that it was impossible to study. To I wrote labels for the few mosses which I collected this summer and send you The package This morning. Of course I held out the Sphagna, wailing

in a hodgage for this misself has been a seem to the sample of the sampl Namstorf. How please do not consider that I am in a hurry to get the Metermiations from you. 28 vant absolutely necessary that you should ever mane them at all, unless you ful like it. In case there is more malerial Than you care for of any of the 3a. mosses I should like to how you put them

468 Tope Fireet, Providence, Tov. 23, 1907.

Dear sartlett:

The mosses care safely today. Thank you very much for the , but, really, I almost think I am more thankful that you said you were in no hurry for the names; I am so crowded with other world just at present. I am interested in what you say about Carastorf.

About a year ago I wrote him asking if he would care to examine my Gaspé hagna. I never got a reply and consequently assumed that he did not care to see them. Terhaps I did not have the correct address. If you will give it to me I will write again. I have recently thought of writing to another luropean sphagnologist, but have not done so yet.

Georgia rosses to Urs. Britton. I have today had a letter from her in which she says they are all broken-hearted over Underwood's death.

I am not surprised that they are.

By the way, at the next club meeting you may expect me to ask if you have found out about the meaning of the "3m/32 solutions" mentioned on page 261 (et seq.) of the October Gazette, provided I don't forget about ot.

Cordially,

Dear Prof. Bollins; letter he said he was working constantly on my not at the Blub meeting Thagnologia universalis. When I get out of the (on account of grup) I have Informary Del send you writing a little sympters specimens of the Ja. Sphagna, which I hope will help you Will bust regards with the paper in the Oct. Tagello. H1+1Barilell Thave received from Narustory a report on my Ga. Sphagna. There were two new species among them, one, which he has named I. Bartlettin , means related to a Braylian opening of the Caymorola, the other,

which he has called I. validum, marist d'us I mobilense from alabama, a member of the subsecunding I In wrote a very pleasant letter underd, and I am I sure he would not have received your letter of a I gran ago. The address, Directory is Neuruppin, but 18 1 bei Berlin. You must have willing to the wrong

Cerkus 60, Cambridge, Mass. 13 Dec. 1907. Dear Mr. Bollins; I sent you cotypes of two new Iphagua yesterday, Most of the material had gone to Warnstory, so that you and Mrs. Button got the only duplicates I can spare. Jours very bruly, J+1+1 Barllel

468 Hope Street,

Providence, E. I.

Dec. 13, 1907.

Dear Bartlett;

The Sphagna came today. I am greatly obliged for thom. An sorry that you were not able to attend the last Club meeting. You missed <u>Leavitt's talk</u>.

Thank you also for the solution of the solution question.

I had about concluded that the "m" probably had something to do with "molecule", but felt decidedly uncertain in regard to it.

I assume that a 3m/32 solution of MaCl would be (approximately)

5.5 gm. MaCl per liter. Am I correct?

Are you planning to be on Cambridge during the Christmas vacation? If so perhaps I may see you if I can find time to take a day's vacation between now and January. I have a few plants which I want to compare with authentic specimens at the Gray Herbarium the first chance I can get.

Cordially.

Perkino Hall 60 Bambridge Maso. Dear Prof. Collins, I have just had a letter from Warnstorf in which he says that he is willing to determine your Sphagna, and hopes that you well sud well prepared, ample specimens (I told him yours would always ansiver That description) lo 6. Warnstorf, Friedenau, Berlin, Kingstrasse 55. The is at work on his monograph and will report on your specimens at once. Yours, HHB (Over)

Mexpects quite a "pile" so you might as well make a clean spreap of all your undetermined Sphagma (from N.E. as well as Gaspe).

HHB.

14 Jan. 1908. Dear Prof. Collins;
9 am sinding the specimen of Scapania gracelis which I promised you at the last Club muling. Grof. Evans tells me that The Species is known in America July from Fumland 6 runce Edward J. & Mr. Desert 9. so that the new station is somewhat "exciling".

Jours, HH13, 4 1 Mo. tract, rovicence,
January 16, 1908

ear arthur:

After man, course have had a chance to examine the le Ungland mornes thick you turned over to me some time and. I have not had time to examine your Georgia specimens yet, and so my time for more work in so event erratic Lar moine to report on this let now.

Dear Bartlett:

Iknew there was something else that I wanted to add to my letter. It was about Warnstorf. Your note came all right and I also got one from W. himself; as a result of both I sent, within a wddh, a package of Sphagna (3 pounds).

Georgia mosses collected by H.H. Rartlett, 1907.

Providence Feb. 4, 1908 Dear Bartlett:

I have just received a small achage from Dr. C. Tarnstorf which contains two a ecimena of the new Ophagnum Faxoni which was described in a recent number of Ehodora. One packet is marked "Herb. Partlett" and is, I suppose, for you. ere you expecting a speciment I wrote to arestorf some weeks ago asking him if he could tell me where I could get hold of a specimon, hoping that he would do just what he has. know that Dr. Farlow is extremely anxious to get a specimen and I shall divide mine with him, unless he has since then lately succeeded in getting a specimen himself. Your specimen is in two pieces and perhaps you will feel like dividing with Ir. Farlow too. That would give him a somewhat better showing on the opecies. The package came to the college today and I am now at the house. I will try to bring it up here tomorrow so as to have it ready to send when I herr from you. In the meantime I will write to Dr. Farlow saying that I have got a specimen that I can divide with him, but shall not feel at liberty to mention you in connection with the matter until I hear from you.

Cordilal; yours,

13 May 1908. Dear Croj. Collins,
By all means use fact of my maleriae of Jah. Laponi in order to make up a good specmen for in Tarlow. I am surprised that he has not found some of The original malerial in his own herbarum, for 9 understand from Mr. Chas. Fajon that marly verything was collected in duplicale and that her.

Farlow has a very complete sed. I made the translation of the description in Tredurque for Warnstory of have since Offered to find and the Expe Cocality of possible by funding other specimen. collected on the some

By the way, Bush

promises me material of

the missouricións from the

type locality, If your

have no material of the

original collection Dée

'ny 15, 1968.

ea Bartlet :

I have taken about one third of the material that was in your envelope and put it with what I had had aside #0 for Dr. Farlow. I have not yet heard from him and shall not send the "phagnum until I do. If he reports that he has a specimen from elsewhere I will of course, return the "segregation" to you later. enhaps a generous amount of the material my be found later in the Cryptocamic Herbarium.

I shall be much interested in your effort to find the type locality, and wish you success in the search.

There no material of <u>Thernun</u> missourieum so of course I should be delighted to get some if it will not rob you too much. Yes, I got word from armstorf two or three weeks ago as to the determinations he had made of my Therma. Hothing new, but some interesting ones along old himes.

Cordinally,

Verkins 60 Cambridge, Mass. Dear Prof. Collins; 5 Dec. 1908. There will be guite a lot of duplicates among the mosses I gave you. If you care lo use my labels let me know the different Kinds, I was ruminded of this by Dr. Farlow, who asked for blank labels to use in sending ont some duplicale fungi which 9 collected and lumd over to him. Except for one speamen of each number which I kept for myself you have all my, moss material. Ill sund you a set of the 1908 Sphagna (marly 100 numbers) when I hear from Marusloy. By the way, I have analyzed the Spragnum ask from soil 24 (alpine meadow, S. side E. Jork R. S. a) and

should like to know what species is was. yours very succeely, Harley Harris Barchers.

Dec. 19, 1908.

Mr. H.H.Bartlett,

Perkons 60,

Cambridge, Mass.

Dear Bartlett:-

I have just had an opportunity to look up the matter of the Table-top Sphagnum which you wrote about on the 5th inst. As you do not mention there being any number on the packet I assume that there was none. If this asumption is correct them the plant is, with very slight margin for doubt, Sphagnum Girgensohni Russ. If there was a number on the tacket it may still be this species, though more likely one of two other species collected at the same time. The above mentioned is the only one that I collected in Quantity on soil 24, as I now recall it. The other two species being collected "for locality only". If you are sure that there was no number on the sample you are safe in calling it as stated above. If "No. 2" appears on the original packet then it is S. Russowi var, rhodocroum Russ. If this number appears on the original packet please let me know, otherwise I will understand that it is f. Girrensohni. My only reason for saying above "yory slight rarein for doubt" is that there may possibly have been a"No.2" on the packet and it was overlooked or lost before it reached you.

I think very likely it would be a good plan to have some of your blank lates later. Then I have a chance to overhoul your mosses I will let you know low many of each you had letter send me.

Cordially yours,

J. FRANKLIN COLLINS 468 HOPE ST., PROVIDENCE, R. I.

Dethesda, ma. Dear Broj. Collino, 8 Jan. 1910. from the Office Tomorrow a rallux uninspiring lille packet of mosses. They have a common look about them, but come from a rather out-of-the way corner of Va. may be acceptable on that account. I have kept duplicales & should like the names if you ever look them Many thanks for the separates from Rhodona, which came to hand a day or so ago. yours JH1H3

Verkins 60 Cambridge, Mass. Dear Prof Collins, Namsloy has determined some of my Spragna and 9 am sunding you duplicates of most of Mem. I sliet have a great lot of undetermined Subsecunda which I wice send out when I get the Hours, 14.74.73. 3 March 1909,

Dear Prof. C. Cambridge of must thank you for the little book on trees, which got some line ago + nighted to acknowledge. It is very useful and convenient. Send me the name of my no. 1854 from Barnstable Co. Mass., without too great Trouble. I med the article I'm at work on. I maccessible I can sind another Specimen. H.H.13.

THE SPACE BELOW IS FOR THE ADDRESS ONLY

Betheda Ind. DEar Brof Collins.

9/ you are not miclosed interested in the inclosed circular, wiee you please refer I send a specimen of a new Mass. Sphagnum. Ot is called in my "Woods Hole"

paper (p. 230) "Sphagnum (mean Sph. dasyphyllum Warnse)" IT occurs at Woods Hole me a brackish situation. You may run across il in R. I. Have saved up a live file of mosses to sund you, including some Calharinaire. With best regards,

Dethesda, Md. 16 Dec. 1910. Dan Broj. Collins, I have a few order of mosses which I shall send you soon if you want them (including perhaps a few Polytricha T Catharines a a few of tricka T (atharinaeae) In the case of my own numbers there will be no necessity for delemmations until you get around to it, but there are a few sent me from Ohio Stale Univ. (under The mistaken impression That I could determine them) which I wish you could look over. If you really haven't the time,

do you think michaels would like them? Would you care to Contribute any sets of 30. specimens of Sphagnum in return for a sei of Exsiccalae? Have you ever distributed duplicates of any of the Sphagna which Warnstorf determined for you? Nin best regards, 9 Au, Yours succeedy,

MARS.

Dear Prof. Collins.
Miss Detmers so in a hurry for the moss determinations, and 9 am Murefore sending her collection now, Det get my collections logether in the course of Two or three weeks, and forward them to you then. Des put True To work on The Dicrana before long. The scheme in regard to Sphagna is as follows: We are getting together Sphagna det. by W. in sets of 50, for distribution as Sphagna Americana. Most og what un han so far an S. E. portion of from the

the country. If you have any Gaspe Sphagna in quantity, upon what terns would you exchange Thanks for the separates, which have come to hand. Mr. C. C. Dean, of Indianapolis Ind. Mas used the corrugated paper method of drying for a long time. Where he got it 9 der not Perrow. Will you send me a set of R. G. oaks in eychange for Md. & Ga.
oaks? I have a see of about 25 duplecates. yours

335 Packard St., Ann Arbor, Michigan, 25 May 1916.

Dear Collins;

I'm just running over some
mail that should have been answered long ago,
and find your card asking about my habitat
and geographic distribution. The data are
as follows: Acting Assistant Professor of
Botany, University of Michigan. I have
retained a connection with Washington,
having been simply "demoted without prejudice"
to \$1 per month. I am acting during the absence
of Prof. Hus. If he comes back when his leave
is up (three years) I'll go back to Washington
or hunt elsewhere for an opening.

Still want Polytrichum and Catharinia? If you do, let me know, as I'm in a new locality and will be glad to gather some.

Cordially yours,

JHH13 artlell

7 Kirkland St., Cambridge, Mass., May 28, 1910.

Postmaster,

Winchester, N. H.,

near Sir: --

Would you be so kind as to place this letter in the hands of some one who may be willing to answer my inquiries ?

There has been a great deal of interest lately in some parts of New England as to. the greatest size attained by certain kinds of trees, and in Rhode Island, especially, statements have been published, based on careful measurements of particular trees that were claimed to be the biggest known of their kind. In reply to such a claim concerning the white pine, I mentioned the magnificent row of white pines bordering the Ashuelot River in your town, and expressed some doubt whether Rhode Island could surpass them. Reliable figures were called for; so, for the credit of Winchester, I am writing to ask if some one will not take and send me careful measurements of the girth of sev erel of the largest of this row of pines. The girth of the trunk should be measured in feet and inches breast high from the ground. If a tape measure is not to be had, any stout cord that will not stretch will do and the measurement taken from the cord carefully with a two-foot rule. Of course care should be taken to keep the tape or cord level all the way round the trunk, so that the measurement will be true.

Tendering my thanks in advance for the trouble involved, I am

Peachan M. Sec. 11. 'Su. Dear Sir. your faver of 10th reed, I avant 22 of your plants. Those marked fr." - if you havent the fruit, don't send, as I have the flowers. I like fruit in all cases where it is possible. my this years list of duplicates is in the hands of another Botanist; but I enclose my list of 1883. a few of them may be exhausted; Do please delect-20 25 or 30 number. i. E, if you find that number that you want! If you don't find a sufficient number of desidera to in This lest, I will send my new list when it returns from Penn, you can forward your plants a tonce, or wait till the returns is agreed a from, yours busily, F. Blanchard In. D. Reacham 14.

Plants desired of J. T. Collins by F. Blanchard. 118 2974. 198 3670 T. Europoea. 539 600 692 fr. 629 795 980 fr. 1249 Van. 1. 1247 mitten wrong. 1286 1443 1526 1576 1684 -2285 -2315 fr. X (over) 2550 2579 Van. 1.

Peacham bt, Dec. 16. 1884.

Mr f. F. bolling Dear Li your letter, with tabels, reed tast night, and the specimens to-night; all in good condition. The specimen are finely pressed and very satisfactory. son e of them lack fruit on root; but, of course, that is unavoidable. In regard to your selections from my list, Fam somewhat puzzled; but I think you have failed to understand the figures, because you have retected several numbers that I am quiti sure I never put on my test of in a.

The numbers of my duplicates are given in the order in which They occur in mann't tealadgue, except a few added on the last page. After reaching numbers of more than two places, I simply amil the thousands and hundreds figures except at the lot of a new column, or where the hundreds change. For example. 1 2 should be read 1001 2 1002 1003 1004 ve. If you still have my list, please make a new relection. If you have last as destroyed it, let me know and I will send another, Prof. Bailey will understand the figures, if my letter does not make then clear to you, your truly. It Blanchand had

Dear Lis. I fargot to say that none of duplicates are poisoned. I poison all herbarium specimens after they are mounted and most of my duplicates are kept in the same quies covers with my mounted ofecimen, Than very little trouble from bugs, How first been mounting your Blanchard, plants. They are very good tritolium replexeum.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE.

Mr. J. F. Bollins, 9 pefferson Street. Providence,

Peacham Wt. Dec. 19. 1884, Dear Lis. your card reed to night. I send package of plants by same muil with this card. Grof me a card if they arrive in good condition and prove satisfactory. your buly, F. Blanchard h. D. Reacham It.

NOTHING BUT THE ADDRESS CAN BE PLACED ON THIS SIDE

In A. F. Collins affection theel rovielence, R. S

Peacham, W. Jan. 25. 1885. Lear Fir. In reply to your of 23th with yan inclined to courides your Tripolium marked T. reflexum as I hy bridam = Alsike. It certainly dont agree with the description of Y. reflexum in Gray's mornal The leafle to are ovalo instead of of oboval and the heads are certainly not "larger than in No. 2." Probably the species of this gener hybrida more extensively than is generally supposed. Please refer to plant to Prof. Gray. of Blanchard M. X. Plachom, bl:

Reacham, W. Oct: 15. Dear Lis. Gyesterday reed. Shall be glad to examine your hit with a view to a exchange, though I fear ther may be few that Javant, because I have exchanged with other Rotanists from your section. My new list of dups. will not be ready before December. Possibly you could find entiry to in an 1885 list. yours truly. 7. Blanchard 4.0. Peachen, bl?

Rothing but the address to be on this side.

Peacham, VI. Oct. 27, 1886 Mr. J. F. Collins. Dear Lis. yours of 24th, Together with package of plants, re'ed last night. From a hasty examination I judge that the plants are very fine, I certainly have no fault to find, and hope the bundle that I send A in return will be as satisfactory to you. I send package by same mail with this, It was made up after 10 at night. If I have overlooked any thing, notify me and I will make any deficiency good. F. Blanchard. Irof me a card when the piking reaches you. yours were in fin condition

Peacham, bt. Feb. 14. 87. Mr. J. F. Collins, My Dear Sir. If the opiciones from California are first class, and if you can find any thing in the exclosed list of dupit. That you went, you may send me thous species that I have underscoud. I have not a new list of duft, at hand, one being in Venus, and the other in Jowa. Am very busy . Exercitionity. For Blanchard M.D. Preac ham, bt.

Reacham, Ut. Feb. 27. 1887. My Dear Li. I must apologize far delay in acknowledging receift of your package of plants. I have been extremely busy, and did not open the packet of labels till last evening, when I found your letter. your plants arrived allright and from a very harty examination I think they are very fine. The corners of the package were somewhat broken, but no serious damage resulted to the plants. It is well to use a little heavier pasts-board in sending plant by mail, I sometimes une bass'as spruce boards planed very thin - eag & wich. Levelove my hili of dups.

in Musei & Hepolicae. The specimens are mostly very fine ones and their diegnosis has been by E. A. Rau, or S. E. Calou. Shall he happy to hear from prompt in replying. Forth part mouth I have been daing an immense amount of work - professional, botanical and in other capacities. Lucro here is 5 feet deep. yours cordially. F. Blanchard, M. D. Peacham, VI.

Peacham, W. Mar. 3. 87. Dear Lin. I send by next mail a package of morres and Hepaticas &c. which, I hope, will provi satisfactory. If you have an abundance of & permens of Bux baumin aphyllis, please send me two as Three, and I will pay you in any way you yours truly. 7: Blanchard, h. &

W. Carrolf St. * Kolhin soridence,

4, R. G.

Peacham, W. Meh. 13. '87. My Dear Sir. Wried. Many thanks for the Burbannia, () It is very surious. Inreply to your question: - I have found it difficult to obtain good carrespondents in mosses. you might try Dr. Fred. Brendel, Rearia, Ill. He sends good specimens write to him what you have to offer, and I think he will antury you. you might try also Prof. H. A. Freen, Chester, S. C. But his aprecimens are not quite as good. F. Blanchard.

Deacham, &t. Apr. 5, 1887. Mr. J. F. Collins, Den Si, yours of structed. I return your list of teal. plants with deviderata marked with a (X) under the species desired. Lendonly as many as you want of my dups, in return. Many thanks for the Burtharming. I have so many Pacific coall plants yet unerfamined that wo doubt I arder many duplicates; but will risk their few mare. I find great difficulty in getting good specimen in fruit. yours in a harry. F. Blown hard In. D. Pleas have, U1:

Peachom, Ut. Apr. 13. 87. Dea Lu. yours, with plants, wed. all very satisfactory. I send return package by next mail. If you find yourself defrauded by the exchange, let me know, and sullever up. 3 on 4 of your desids, mere exhaustet. Let me know of the peky. reaches you in good condition & is sall factory yours at quidnight Blouchard.

Oronidence, R. S.

Westminster, Ut, Jan 29, 1908 Prof. las. F. Callins, Providence, R.J. Lear Sir: -I am distributing spicemens of Coun. Rubi mostly newly described species Ou Rhodora, pages 4-10, 1907. Sam also distributing such from South eastern mass, and R. J. One descrehed in Tonya Jan. 1207 I have found only in R. S. and S. E. Mass. This is & multispenie Blanchard I should like place a complete set of . Coran. R.S. 85. E. mass. mbi in the Brown Univ. "echapium, a set that has sufficient specimens of each species to make it of value. But I ought to have some reasonable compensation for it. Can I expect to obtain such for such a set! I am also distributing specimen of dan new White Buches and fall our

Shadwoods. How saw well imagine what the expense has been to me and I wish to get something out of them to enable me to sontime the work into the West. I have been to Lake St. John and Otland, Can, and as far must as Rochester M. J. Jours truly,

W. H. Blanchard.

Brown University, rovidence, R. I., Jan. 31, 1908.

Wr. W. H.Blanchard, Westminster, Vt.

Dear ir. Blanchard:

Yours of the 29th is at hand. I hope you will reserve, temporarily, a good set of your distribution of the species of Rubus, Betula and Amelanchier, for our herbarium. I dare say your prices will be reasonable, but, in order to more fully comply with the buseness regulations at the office of the University you had better send me a memorandum of the price and the probable number of spedimens in the first lot before I send you the official order for the same.

Very truly yours,

Westminster, Vt., Jeb. 4, 1906 Prof. J. F. Collins, Providence, R.S. lear Prof. Collins, -Jours is at hand. I assume that 10cts, pur sheet is a common piece. I shall more ready till late in march. I prefer to send them con with a list. after examination you can send pay accord ting ing to the red take required. If you do not object I shall send good sets of each species showing the plant fully and from more than one stationgiving some idea where it years and how it looks. Better have 10 specimens of me that you are sure of than from 5 presons face of whom probably guess. Jours truly, W. H. Blanchard.

February 8, 1908.

Mr. W. H. Blanchard, Westminster, Vt.

Dear Mr. Blanchard:

Your letter of the 4th is at hand, and the suggestions therein are satisfactory to me. We should be plad to get a good set of all the New England species that you can send us.

Very truly yours,

Brown University.

(apr. 1908) W. H. Blanchard.

W. H. Blanchard

Westminster, Vt., apr. 14, 1908. Prof. J.F. Collins, Providence, R. J. Lear Sir :-Iam sending youabox containing 15 & sheets of botanical specimens as shown in detail on the sheet of paperenclosed. all are carefully labeled. They a The Rubus is mostly from Coun. and with some from R. I, and S. E. mass, illustrates what is in R.S. nos 88, 89,90,91, 96,99 and 100 are new species and this my first distribution of them, agoodly number of euch is suite show both the type and range. FT has been miseendestood as has 99 and I hope to make each plain. It is as new as I resurrected it. 101 has been miscended and efforts have been made to separate may many varying forms.

103 I am tuying to show up as it is. Of the Shads I send enough material gathered at different season stages of growth to show what Canadensi is and how the "oblongifolia" forms vary from it - and how they do not. Of the friches I send my newones and a few of the others to show the

differer.

Thank a lot more rubi which I shall try and distribute & this fall and someyt wenter.

Hoping these specimens may be satisfactory and looking for the financial returns to aid me in exploring or in the mest this season, I am

Jours truly W. H. Blanchard!

P.S. The Lox is directed to the Hechaicem.

April 16, 1908.

Mr. W. H. Blanchard,

Westminster, Vt.

My dear Tr. Blanchard:

of specimens arrived in good condition today. I am very much pleased with the plants, both on mass account of quality and quantity. I hope you will let me know of any future distributions of this sort and give me a chance to get them for our herbarium.

If you will send a bill for these plants I will "OK" it and send it forward it for payment. As it usually takes some time to get a bill through the different committees and into the Registrars hands for payment I would suggest the advisability of forwarding it very soon if, as I suspect, you would like the money within a few weeks.

Very truly yours,

5- Surracy an., montpelie, Vt., Oct. 11, 1916-Prof. Collins, Providence, R.J. Dear Su: -Jan chuky to make the exquest I am making, but you care thus help a fellow botanist. I am making a record of Riderul my mather being one. So I ask you if you know any person by that name? and especially I ask you to copy from the Providence Dudoy the names and address of Rideout, or Ridouts there and also in the Browne univ. Catalogue, Thope some day to meet with the n.E. Bot. Club again. Tintend to distrebute this wenter my Ruher made years ago in the South and West. Will the Unio. Luy any specemens at 18ct. each? Jours Truly, W. H. Blanchard

Brown University, Providence, R. I., October 18, 1915. W. W. H. Blanchard, 5 Guernsey Avenue, Tootpelier, Vt. My dear Mr. Blanchard: Your Letter of October 11 reached me a few days ago. but I did not have an opportunity to get the records looked up until today. I find there is no one mentioned in the Brown catalogue since the establishment of the College by the name of Rideout or sidout. There is, however, in the city directory two names, as follows: Ridout, Bubert (Stamper), 48 Hudson Street and the other, Ridout, James H. (Coachman), 167 Ontario Street. I hope this information will be of some use to you. I will refer your memorandum regarding the distribution of Rubus to Professor York who now has charge of the botanical work here at the University. I presume if he desires the set he will communicate with you before long. With best wishes, Very truly yours, JFO-G

was a limb spead of 46 st. one vay and 84 ft. the other. He did not cay what kind I am rak' it is but I sup. pose it is a white oak as' that kind has the quatest trong outal timb spread. I white oak on my grand-Latter's wood lot, west of Frim town, had a circumference of 17 ft. 4 in. but was cut down a few years ago. It was found to have over four cords of wood in its branches not rectioning the lumber in the trunk, Yours sincerely, Ruth Boss.

North rituate 1.9. June 2, 1910. Prof. J. Franklin Collins. Lear Sir; your article in the arbor Lay framphlet, "Who Knows Where the Large Grees Grow in Rhode I sland?" was very interesting to me' but I noticed that there is no elm included in the list so I thought I would tell you about the most beautiful, if

not the largest, em in the state. Freast high it measures 14 ft. 6 inches and it is noted all over the town for its perfect symmetry and beautiful shape. It is a perfect type of bouquet elm and forms a towering dome' of green evenly rounded from base to summit but unfortunately the elm beetles have been a work on it for two or three seasons and we fear. its days are numbered.

Its lowest branches vegin at about the height of the eaves of a two story house and arch above The chimneys. It is known as the Johnston elm and grows by the roadside in front of the first house on the right hand side of the road going west from the village of North scituate. The man who owns the place is also authority for the statement that an oak tree on the farm, 15 ft, in circumference.

June 6, 1910.

Miss Ruth Boss,
North Scituate, R.I.

My dear Miss Boss:-

I want to thak you for the imformation about the elm and oaks contained in your letter of June 2. I am very glad to get it, and shall be glad at anytime to get any further information of a similar nature which you may have at any time. You may be interested in learning that the records of the elm were accedentally omitted from the pamphlet. There is on standing on Cemetary St. in this city that measures 15 feet 1 inch at its smallest place, about 18 inches from the ground. It branches very low down. It is not a well formed tree however. An elm in the village of Limerock measures 14 feet 4 inches breast high, and the one at Prospect Terrace in this city measures 14 feet 2 1/2 inches.

I shall hope to see the elm you mention the next time I go out to North Scituate, and perhaps the oak also.

Very truly yours,

aurora, Ill. 2-23-1885 Dear elir: The plants came last week - have looked them over to day. They very many broken ares. They are quite satisfactory. One was named Erizeran hys-Lofolius for 1246 which I ordered. Was that so named by mistake or has the name been changed? It answers the description of 1246. Please let me know about this plant, Very truly yours

aurora, Ill. Feb. 3,1885. Dear Sir: I send you to day a capy of Maris Cat. in which you will find my duplicates marked at the left of the numbers mostly with blue but some with lead pericil. Blease select by number, and was your like but fut them in regular order, Respectfully yours, J. E. Boyce.

You mistook certain marke made by a correspondent and are not duplicates marks and thus ordered 10 not among my duplicates. When I put up 3058 and 3/39 I altributed the mustake to your copying but when I seferred to the catalogue that you had I knew that the difficulty was what I have named above. Some of the plants are not Lo good as I could desire and I expect only an equivalent. Eine me the first 19 in my lish and enough of the others to make up my dut, Hoping the plants will reach you in good condition and prove satisfactory I remain, Lours very truly, Thos. E. Boyer.

Middlebuy, Vt. Dear Lin: Nov. 1, 1886 24th of Och has been forwarded from aurora, Ill. Ged send along your list. I use Marin's leatelyw. It may be some little time before , Eispielfully, J. E. Boyer,

10 Carroll s 1. S. Lollins

Middlebury, Ut. 12-13-86 My Dear Sir: Lours of the 10th al hand. Eun list was duly received and is preserved. I moved last summer from aurera, Ill. Wethis town and in the confusions of packing my check list was last. I thought I should be oblifted to dofer our exchange but for a book I found it and will look over your list and return it this week with a list of my duplicates. I have a few more du plicates to check off on my list and then it wild be ready to mailely, T. E. Boyce.

. Franklin Colleny

10 Conoll St.

Middlebury, Vt. DEC. 13,86 My Dear Sir: I explained in my postal this morning why I kept your lish so long. I have finished looking over your list and give you below a list of my desiderata, in addition to the numbers you may send any of those the names of which are written at the End of your lish. You had better sellch more than my disiderate as I may not be able to send quite all you choose. In my plant cat which I mail you my duplicates are checked blue. Please take down the mos.

of your desiderata and not mark them on the list. Respectfully yours, Thas. E. Boyce. Desiderata of J. E. Boyce. 222 m 2 10 298 V 579 V 818 van 2 V 1155 1236 V 1342 V 1526 V 1808 2348 2797 1 2910 3268 V 3779

Middlebury, Ut. DEC. 27,1886. My Dear Sir; received your package of plants several days since but have not yet had time to open it. In a few days I Expect to put up your desiderata and mail trem. Respectfully yours, Thos. E. Boyce

Middleburg, Vt. Feb. 5, 1887. Dear Sir: I have at last fut up your desiderata all but 3415 which is out of stock. I have put up another form of Botrychim that is I think the two are slightly different. 3779a was name for me by Egra Bramard according to Eaton's work I think. 37796 was sent me by Frenk E. Wind. I put in 35-34 which you did not order thinking that if you did not have it you would be glad to get it. It was not on my lich of duplicates.

of the Exchange is not satisfactory I will make amends in the fute a. I have not very good specemen of 3736; it is very rare; I found it growing in but one place on the Keweenaw Pen. Daping that the plants will reach you ingood condition and from satisfactory I remain Lours very truly, Thos. E. Boyer.

Providence, June 27, 1893

Mrs. E. G. Britton Columbia College, N.Y.C.

I have several hundred envelopes of unpressed mosses collected mostly in Rhode Island in 1886, 1892 & 1893, also some collected in southern Somerset Co., Me., in 1886. The greater portion of all are unnamed. There are quite a number of duplicates (from different stations). I see very littel prospect of my having time to make more than a few of the determinations for some time to come, and have decided to turn a long portion of them over to some one belse if it can be satisfactorily arranged.

Would you care to have them or part of then and on what conditions (i.e. - if different from the usual ones

in regard to Phanerogams)?

Veru ttly

Columbia College in the City of New York DEPARTMENT OF BOTANY

June 29th, 1893. 189

J. Franklin Collins,

Dar sir,

slave, one who will do for me the work that I did for years for others, the naming of spe_imens for instance. Since I began to write of try to write a Handbook of the mosses of the Eastern U.W. to try to help others to help themselves, I realize the need of it, more and more; for I get no time now to name material for others as it only adds an extension to the range, now and then, and I cannot take the time. Pergaps this will explain why I think it best not o to offer to name your mosses, though I do not like to say no, and I have nodoubt I could name most of them at sight.

Thanking you for offering to send them to me believe me very sincerely,

Elizabet Prittie.

Providence July 22, 1894 Mrs. E.G.Britton

I have been much interested in your article in the Agassiz Observer (on mosses) to which my attention was recently called by Prof. Bailey. I have always admired the mosses but have never xxxxx studied them very much; still, enough to see the disadvantages of the glass slides over those recommended. I am particularly pleased with the possibility of keeping the slides in the packets with the specimens.

Would it be asking too much for the privilege of seeing some of these slides——if possible bothe the slides & permanent mount? I will of course gladly refund all

postage,

JFC

J.F. Collins,

Dear Sir,

It gives me great pleasure, to learn that you ahave found anything in my simple little moss leassons that will help you in your work. I fear that from your not knowing anything about the mica slides , they are not as much used for Algae, as I at first supposed. I had a box of them given me labelled " mica slides for Algae" in Dr. Morongs hand-writing, and as I knw that he was to have collected characeae for Dr. Allen in Paraguay, I supposed they came already cut. Im learned afterwards that he had them cut for his own use. I enlocse a moss slde which you may keep, and the ordinary slide I use for first examination is the glass one standard size, one inc h wide by 3inches long, with round cover gla I find this will do for boiling over a lamp. At night I hold it over tye chimney of my Student lamp, and in the dayntime I use a candle or an alcohol lamp. As you say the great beauty is to be able to keep them with the specimens, and I also find that focusing with a high power, I occasionally break a cover glass, an utter ijpossibility with these slides. D9 you know Mr. Bridgham ? His home for the summer is at East Providence Centre, and he is doing some drawings for me. I think he would be gad to show you some of his slides.

Very sincerely,

ELIZABETH G. BRITTON, EDITOR.

Columbia College, New York City.

m ar Mr. Collins,

I have been intending to write to you and congratulate you on that nice set of Algae just issued, in which you and others have done your share so nobly and so well. It is a credit to American students to have such work to show. And furthermore it throws all recent attempts to distrivbute exsiccatae by foreign collectors in the shade, and shows them what we call good work. I shall be only too glad to send you duplicates of mosse and will get ready a set for you at once. pesides, I think I can rpomise prof pailey for the Department, a set of the Taeger duplicates of Euroepan Mosses, I have I6 sets of them, and have taken care to keep as many duplicates as possible, in order to help American students to become independent of so much Europenan help. please let me know what book you have in the Library too, as occasionally I have a duplicate to spare. Is there as set of my re prints ? on the Mosses ?

whense.

I do not know that it is necessary for us to make our section a chapter of the A.A. I rahter think we shall work better independently, simply using the Observer as our journal, for the present. The Linnean Fern Chapter wanted us, but their little pamplet can not afford illustrations, and they are very important. I shall be very glad to reveeive any sufggestions, and am waiting to hear from those who would like to help. My principal idea is to facilitate exchanges, stop this sending aborded for name ing and distributing, our American Mosses, and teach others how to help themselves.

Dr. Evans will give us soon IO-I2 papers on the Hepaticae, which we

Cryptogamic Botany

A DEPART WEIGHT OF STREET LUStrate and distribute specimens of, and Miss Cummings and ELIZABETH G. BRITTON, EDITOR.

columbia College New York City der, have promised to do the same for the Lichens. I also hope later to do the same for the F.W. Algae, and the warine. where are so many interesting things to be told about them all, that even such men as Faxon, and Rau and men who know the mosses, and have known them for years, write to me, and say, " I am so glad you told me that about the naing of Buxbaumia, I shall not forget it, it is very quaint" and there are lots of things coming up all the time that we want to have looked into right away. I mean to go bakck to my school-teaching days, and hold the readers fresponsible too for a certainamount of work, and not let my suggestions as to what remains to be done go in one ear and out of the other. I shall send you the White Mt. Moss, metraplodon mnioides, from timbers of the stable on the summit, saturated with urine, collect ed by Faxon, and others. and will refer you to D.A.Burnett, Bradford, Penn. for specimens from his region. He has duplicates of good ones, well named. , send you his list with this.

Sincerely yours,

Els. Britten.

Cryptogamic Botany A DEPARTMENT OF THE OBSERVER, May 28th, 1897. ELIZABETH G. BRITTON, EDITOR. Columbia College, New York City. J. Franklin Collins. Dear Sir. Your letter of the 21st is received. I shall be very glad to give what assistance, I can, and willingly look over your drawings and hor specimens. I shall be away from home over necoration 'ay, but after that expect to be regularly at my work, and shall hope to be able to give them prompt attention. It seems unlikely that Scoulerig should be found in Maine It may be one of those dark Grimmias that grow in water, however such as G. acicularis (L.) Multer (Racomitrium acicularis) which grows in mountain streams. I have never known of Scouleria having been found anywhere else than on the West Coast and the Rocky Mountains. wours sincerely, Burartt & Both

Cryptogamic Botany

A DEPARTMENT OF THE OBSERVER, PORTLAND, CONN.

ELIZABETH G. BRITTON, EDITOR.
Columbia College, New York City.

June 3d, 1897.

Dear ..r. Collins,

and Anacamptodon have been received. You know perhaps that accroding to the lat4st treatment of the genus, apocarpa and rivularis are separated, and I think correctly. It is very kind of you to send me the Anacamptodon. I do not think wehad it from Main, and we are always gald to have a new staterepresented in the herbarium, and maine has not been at all thoroughly worked. I think Prof F.L. Harvey of Orone saine would be glad of a set of duplicates of any Me. mosses that you can spare for him, he has been sending me some for naming.

You ask me about your drawings. I think they are very good, and I ce rtainly should keep them with the speciemsn as you study them. At kew they file a separate set of illustrations. At Columbia, we paste on to the sheets in the Merbarium, any illustrations that we get of the different species, then we have them there ready for reference

I shall be pleased to help you at any time that you are puzzled. I wish you could see my Adirondack collections. I studied them all critially tis winter, mounted them up in fine shape, named all the odds and ends, looked up all the doubtful ones, and find that I have 27 rare species, including three that have only been found in the U.S. but once, Bryum concinnatum, Hypnum peckii and M/ ramesii, Azygodon viridissimus, Buxbaumia indusiata, Schistostega osmundacea, of which I enclose a specimen, metraplodon mnioides, Anacamptodon splachnoides, Homalia tamesii, etc. sincerely yours,

123 West 44th St. W.Y.

amrch 11th, 1898.

J. Franklin Collins,

Dear Sir,

Your letter of the 7th is receiv d with the specimen of the culy Ulota, which is probably the most curly form of it, var crispula. U. survifolia, as its name implies would only have the leaves curved, not curled. You will find that fraithwaite recognizes but one species with two varieties, but Dimpricht and others recognize them As distinct species. I am inclied to think that it is a fricult to find the characters assign to each always present in different individuals, but am still anxious to see more of them growing, especially of the var interemdit, with which I do not feel at all familiar. I confess I do not yet understand if this moss is only variety of U. cris, a, why himpright should key them in two different sections and put intermedia with U. curfuifolia in the sect ion where the leaves are only slight ly curled or curved. It looks to meas if there were a mistake somewhere.

With kindest regards,

pours truly,

P.S. I have asked Mr. Bridgham to consult your copy of the Bryolog Europea and Sullivants Icones for some drawings that he is amaking for me. I Hope this privelege will be granted him. and oblige,

Dear Mr Collins,

I have waited a few days in order to give your Uniums more careful attention. They are very interesting to me as you know I have a revision of the genus in ms. and have been particularly bothered by the Mn. orthorhynchum group. These two of jours seem to be the very small variety of that species which has been called Mn. inclinatum, Lindb. See Limpricht Laubmoose and Phil ibert Ref. Bryol. ran. 1895. The capsules are much smaller, and the plant more delicate in every way then the normal form of Mn. orthorhynchum or lycopodio/des, I think they are deserving of further study, and if you have the operculum preserved in any of them, it is said to be blunt in this species as distinguishing it from the others of this group. I think you are safe in recognizing it as a variety, which has been credited to America by Macoun, you know. I have not seen his specimens, The other species is all right for subglothosum, which we not only pseudopu ctatum, the first name. I must congratulate you on the neatness of your slides. They are fine, and I wish you would give me a short notice of how you make them for the Fern Bulletin. I have Amann's account of his method and was proposing to make a note for them soon on this subject You use Glycerine jelly, or course. Thaking you for these specimens which I shall be very glad to keep, believe me most cordially Ellis abotte G. Britton

yours.

DEPARTMENT OF BOTANY.

W. WHITMAN BAILEY, A. M., Professor.
J. FRANKLIN COLLINS, B. P.,
Curator of the Herbarium
HAVEN METCALF, A. B.,
Instructor.

PROVIDENCE, . 1.,

189

My method of making microscopic slides is as follows:

My dissections are made un water on the stage of a simple microscope. This stayl is removables so that it can be placed under a compound microscope and the smaller parts examined without disturbing their position. Such parts as ? wish to retain are transferred to a few drops of delute glyrerue (10-25 fer cent.) on a glass slide, on the end of which is a number is marked with few and into for means of identification. This is set aside, mutil the water has entirely evaporated, leaving clear glyrerine. only. It usually requires at least an hour and after more unless the slide is placed where it will be warm (not hot)) usually leave it over

W. WHITMAN BAILEY, A. M., Profesor J. FRANKLIN COLLINS, B. P., Curator of the Herbarium HAVEN METCALF, A. B., Instructor,

PROVIDENCE, R 1.,

ld9

night when convenient.

after this it only remains to again transfer to hard glycerise jelley by any of the methods in general use. For the "fermanent" plide, I greatly prefer - and invariably use now - mica, as this can be placed to the herbarium sheet an arbit the plant, is at fustened. The necessary leyend for identification can be readily scrutched in the mice with a metal point.

63 East 49th St. N.Y.

..a 25d, 1898.

mear Mr. Collins,

the d of making microscopic mounts to Dr' Grout for The Bryologist the little supplement to the Fern Bulletin, which I think all who are studying the mosses will enjoy reading. I hope this meets with your approval, I have added a few notes of my own, and enclose a Rhode Id moss or the collections which may be of interest as it was collected by Ste phen Olney.

vours truly,

GO BALTA

202 West 103d, St. N.Y. City.

Dec. 18th, 1898.

Dear Mr. Collins,

Your letter of the 4th of Nov. has remained long unanswered. I have been busy with a class this fall, and we did not move up to winter quarters near the Merbarium until last week, too late, because we were can ht in those two dreadful storms. It seems to me that if I ever get settled again near the collections, I never want to move again. This I hope will be so n. I am up at the Herbarium now often and will send you with this a but of maium mostratum and M. rugicum. It seems to me that you have both on your slides, because one leaf has bi-cell along the vein and offer has not. ". rostratum has them twice as large along the vein: on the other hamma, M.T. rostratum has not the cells in diberring rows and M. gugicum has, (See one of jour slides,) ostratum has the cells collener Amatic 1.2 thickened at the ingles, M. rugicum has not . I will enclose Buropean specimens of both, and an American too.

Dr. Front has been sking me to write to you and ask you to take the presidency of the Sullivant Botanical Chapter, but I declined us I knew ou had very little time to devote to the mosses and we

went all you have for critical and advanced work so dont take it amiss, my refluesal.

Yours truly,

El Galut G. Britton

New York Botanical Gardens, Bronx pak Feb. 16th, 1899 .

Dear Mr. Collins,

I end ose a bit of a moss that Dr. Evans found on Mt. Washington 9 years ago which puzzled me at the time and which I have since studies carefullyand seems to me to come nearest to G. caespiticia as indicated. I have sent a bit to Brivaller in Vienna for comparison with this species of alp ne Europe, which I find no specimens of in our herbarium. If you have a copy of Rabenhorsts Eryptflora, you will find on page 778 of Limprichts aubmoose that he figures a cross-section of the leaf with two layers of cells more or less irregular. I made several see tions of this plant, and in the young leaves I find them usually double, but as the leaf gets older and larger they are more often single with occasional ones interspersed in a queer irregular manner The use are the antheridial plants and they are large and terminal. Ir. venndy and 1 to not agree. He says these leaves are papillose. I say they are not, but the cot ells are large and inflated. What do you say. I shall be gladt o have your opingion on this matter. Keep the bit I send you, and when I hear from Breidler I will let you know.

Cordial ly yours,

Gelizahetts. Brithm

202 West 103d St. JN.Y. Feb. 23d, 1899.

near Mr. Collins,

I have made a tracing of your draings and sent them to Dr. Kerendy, with the request that they be returned to you. Your observatuons agree with mine, only I got several sections lower down on the stems and leaves which showed fewer bistromatic cells and more of thed occasional twins in a single layer of the leaf. It is a very interesting species, and I think proves conclusively that it is a Grimmia. But I feel sure now that it cannot be G. caespiticea. (G. sulcata) ; found specimens of the latter name in our herbarium and enclose a few bits. The le aves are longer and narmwer, more sulcate as the tracings from Limpricht Laubmoose show and have a longer white awn to the le.f.l will await Breidlers answer from Vienna with much interest, and if it should be a new species it ought to be named for Dr. Evans, G. Evansi its discoverer. I am much o bliged to you for the interest you have taken in this matter and hope that between us we may be able to settle what it is Many thanks for the copy of Rhodora 1 had seen your article, and agree with you that Maine needs exploring bryologically. How I Wish you were at Harvard. I wrote to Dr. Farlow about it again not long ago. whey need you badly.

Cordially yours,

Gelizahet G. Britten

June 23d, 1899. 189

Dear Mr. Collins,

larly appointed at Brown Univ. and that you will at last be a member of the faculty 1 have neglected answering you letter on account of moving into our new hope here at the gardens and getting serttled and over the spling entertaining of the directors and members. At last I am free to settled Adown to get ready for the columns meet-

ing of the A.*.*.S. and I want to ask you to do some work for us for that meeting. I send you a copy of Science with the noctice, and have made out a complete list of all the species of mosses that were named for Su livant and all that were named by him. Mtrs. H.M. Smith has written this out for me and I have a duplicate copy. NowI want to pick out at C olumbia a set of specimens of all the Sullivantii species and have microscope slides made of them. I want you to help me as you make so much better slides than I do. I will get the specimens out and let you have them if you are willing to do this. I suppose you are not planning to go away just yet. We shall be here off and on all summer, not going away for more than two or three days at a time until Septermber, except for the A.A.A. meeting. I hope you will evouse my long d elay in answering your letter as I have really been very busy.

Yours truly,

2965 Decatur Ave. Sedford Fark. N.Y.City.

Jan. 27th. iSoo.

Dear Mr. Collins,

I have with me for a few weeks, working on the mosses Miss Abbie M. Small, of Morthboro, wass., one of our Chapter members, and she is listing the mosses from Massachusetts in our collections, and local floras, with a view to finding out what has been collected in the state, and where further collecting is necessary or desirable. The finds that only i3 Ophagnums have been reported thus far from a few stations in the state, immediately in the vicinity of Boston.

I write to ask you if you will be a kind as to run over the list enclosed and make any additions from your collections that you can.

You know I am a believer in local work, and this kind appeals to me very strongly.

With best wishes for the New Year from

yours sincerely.

34 appleton St.

Dear Mrs. Britton,

Does one often find Sphagnum fruiting in March, in this climate? I was almost as astonished as if I had found ripe strawberries, but parhaps that only shows my ignorance. It was at Magnolia, in woods near the station -- we found a few fruiting bits -- some fallen capsules, and some still afttached, and containing spores. Last July and August f found plants two species at least, in the Magnolia swa swamp, abundantly fruiting; I looked in my Braithwaite's Sphagnaceae, but suppose the dates were given for English specimens -- then in Lesqueu w and James, and found no dates -- then in the mounts that dear Mr. James gave me, and found the dates ranged from June to Sept. inclusive, and were mostly New Jersey specimens. I should be ever so glad to know with what you can tell me, for two of the Botany Group were with me, when we found them -- on March 13th. We rambled around close to the Magnolia statum but brought back only about thirty species, and many of them sterile. I had promised Mrs. Tower and Mrs. Read that I would show them Buxbaumia growing, and so I did, but the plants were not quite ripe -- they were sitting in little coveys on the bank by the station road.

We got a sterile Pleurocarp that I said was the same that Dr.Grout had named Eurhynchium Boscii, but there was a great outcry--they knew Boscii--I had found it in Brookline where a lawn sloped down to a retaining wall, and also had some exactly similar from the French Broad River--banks of--both golden- and bronze in color, and growing in rather

a close, patch with the stems and branches lying evenly side by side-now these new plants were a gray-green in color, and had woody stems, and
arching loosely pinnate branches-- appearing so entirely different that
the Botany Group seemed to think that "some-one had blundered"--

I am having a delightful time with my preparing my large sheets, Amount only whenever I sit down to mount I have to stop and soak out a box-full of rough-dry plants, which takes all day , and my bedroom smells so of w wet mode that I cannot sleep in it.

Today is Mrs. Livermore's birthday, and I wanted the Group to arrange some sort of celebration, but all they could think of was to let Mrs.

Hunt send her a note of good wishes, which appeared to me so stupid that I added a long letter of my own.

They have got some new members in o the Club, who are not at all botanical, much less bryologic, and these ladies took from us the book-case-secretary we have used so many years, and gave one not half so convenient—they sometimes order us to be all cleared up and awzy by two—request us to keep our shelves neat, hope that np ends of grass will be left sticking out, and this after depriving us of the deep drawers and silk-lined doors, which conceal the boyes and covers

Sood night

myn. In baste Cora U.C.

You need not return the specimens

June 26th, 1902.

My dear Mr. Collins,

and thinking, and recognizing. I have been through the same woods, and come out of it, more or less cheerful and happy. I still have a lot of my own collections unnamed, put away and some of other peoples too. But as we get more space, more money and more help, I shall get them all straight in time, and so will you. I should be glad to help you by running them over hestily with you, if I could. But I suppose most of your puzzles, require critical examination. Still we all could help if you chose to get out a set of unnamed specimens, and send them to "rogest, Drogout, and myslef, we could probably help you out between us.

We all rest in the way you mean, and it does us more good than absolute idleness. It is the outdoor exercise and the pleasure of seeing new places and things. I wish you might get down to see us before you settle down to work again, I think it would do you good.

Cordially yours,

ESBritta

Broux Bark,

New York City.

Feb. ist, 1903.

Dear Lr. Collins.

Dont worry about the exchange. I have enough mounting and work to do, to keep my girl busy for a year shead, so there is plen ty of time, and we are not anxious to build up a large New Ingland collection, but if you have any very interesting things from Maine, we Itll be gladt to see them. I at sorry to hear that your teaching takes so much of your time. We manage to keep busy all the time, but it has taken a long 'ime to get caught up with back work, and this is the first year since I begand the study of the mosses that I have had all the help, mounting paper, envelopes and case room that I needed, and now we are getting in a lot of new furniture, so that I shall have all the room as well. I am to have a little room all for my mosses alone, and nothing else in it, and I shall be very glad.

I'r. Tillaims has returned from Bolivia ad borught a v very fine collection of moses and ferns, the finest that have ever been brought to our collections, so Frof. U derwood says. Prof. Underwood is now in Jamaica, and will go to Cuba later, the Eastern end, to collect fungi with Frof. Darle. Our managers seem willing to pay the expenses for exploration of the West Indies, of any botanist that we agoose to send there. What is the matter with your New Englad moneyed men ? Why dont you start in to wake them up ? Mr. Schermerhorn has just died, who gave Schermerhorn Hall to Columbia. "is Daughter is Mrs. Bridgham of rovidence. (an y u not Interest Ar. B. in travelling and collecting, I know that he has much natural talent in that direction. and has done some drawings of fungi for Dr. Farlow, and some mosses for me. His tastes ran toward Untomology also.

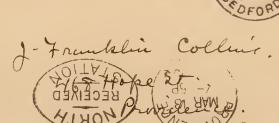

Yours cordially, Ell Button

Prof. J. F. Collins,

Brown University,

Providence, R. I.

My dear Prof. Collins:-

The second part of the Flora of Worth America has just been issued and Trofessor Underwood, Doctor Evans and I have had a meeting and talked over matters as a preliminary for volumes 14 & 15 which are to include the mosses and heaftics.

I am writing now to my bryological correspondents to know how much help we may count on and in what families of mosses, principally in the acrocarpus to start with.

We have had a card card catalogue made from Engler & Prantl Pflanzenfamilien including all the mo∮ses of Greenland, North America, Central America and the West Indies and it looms up as quite a task.

I write to ask you whether you would be willing to take any part and whether your duties at Brown University would permit of your planning to come here for a month or so during the year and take work under one of our free scholarships. They pay \$50.00 and the completed pages of the North American Flora when printed pay \$2.00 per page. Dr. Best has indicated his preference for the families Bartramiaceae, Mniaceae and Polytrichaceae. Dr. True, I hope, will finish up his Dicranaceae and I want to do Fissidens, Orthotricheae and Crimmiaceae, but would be willing to give up any of these to any one else who chooses to take them and tackle the Tortulaceae, which everybody seems to be a little shy of. The only genera that I

positively decline to do are Bryum and Sphagnum.

Fronx Yark, New York City.

11211

I am enclosing a <u>Dicranum</u>, received from Miss Clarke, which I did not have from Massachusetts.

Do please seriously take this matter into consideration and let me know whether you have any partiality for revising any particular group.

With kind regards and best wishes for the New Year.

Sincerely yours,

Elicibate Britis

New York Botanical Garden, Bronx Yark, New York City.

January 15th, 1906.

Prof. J. F. Collins,

Brown University,

Providence, R. I.

My dear Frof. Collins:-

Thank you very much for your letter of January 14th. I shall be glad to hear of any change that will enable you to have more time for the mosses. I will answer your questions in turn: 1. Nothing would happen if you were unable to complete your work on the North American Flora. There is no contract in regard to it. If you have not seen the two parts which have appeared of this work and decide to assist us, I shall be pleased to send you a sample copy. 2. There is no limitation as to time for completion and every author is at liberty to either monograph or compile or both as seems best. 3. The nomenclature is based on the oldest specific name and would probably follow the Vienna Code, although so far and until the next congress is held in Brussels five years hence, there has been no decision for Bryophytes. 4. Each group requires more or less different treatment, but the plan is to get as many species on a page as possible. In the parts which have appeared there are four or five species on a page, but this will hardly be possible in certain genera. The Engler and Frantl treatment will be followed as far as possible although I find a good many omissions and corrections are necessary. I am basing my sequence on a card catalogue compiled from this work which includes all the North American species and Greenland, the West Indies and Central America, making the total 146 genera and 1500 species.

Dr. Best has only expressed a preference for the

Fronx Yark, New York City.

11211

Polytrichaceae, but he has not actually made a definite promise to do them.

The other families which you mention would be fully as interesting. Miss.

Julia T. Emerson is studying the Andreaeaceae and has made a good beginning.

Dr. Evans tells me that F. LeRoy Andrews has made a good beginning on the

Sphagnaceae, so that neither of those two genera need bother us, as I hope

do

Dr. Evans may be able to persuade Mr. Andrews to the Sphagnums.

The scholarship yields \$50.00 a month and the time may be devided to suit your convenience. I would advise however, your beginning the work at such a time that you could have a month free and I could be here. I expect we shall be away between the 18th and 28th of March and a week or ten days is very little time, especially if you have college duties on your mind between times.

Thanking you for your interest and hoping that you may be able to join in the work, believe me,

Very sincerely yours,

Elloubett Brith

Prv. Jan. 17. 906 Deur lin Britton: Mr. A. LeRoy auchens has been writing for perhaps words the gours on the the cheeplist of M. S. Mr. J. F. Collins,

Brown University,

brovidence, R. I.

My dear Mr. Collins:-

We are back from our trip to Jamaica where we made a great haul of mosses, hepatics, lichens and ferns. Doctor Evans and Mr. Nichols were with us as well as Frofessor Underwood and Mr. Britton, so we had a good time and found lots of treasures.

One day last week Miss. Lorenz spent the day with me and we went over her puzzles. Among them was a specimen from Mt. Mansfield, collected on the Fourth of July trip, which proves according to Dr. Best to be either <u>Fseudoleskea substriata</u> or <u>Lescuraea frigida</u>, from Kindberg's imperfect description, apparently the latter. Miss. Lorenz is sending you a duplicate at my request. I also enclose a specimen about which there seems to be some doubt, it may be of interest to you, so keep it.

I also had a call from Mr. Chamberlain, whom I had not previously met, and he told me of your having mounted the Wilson duplicates for Professor Farlow.

You may be interested to know that Mr. Williams is in England, where he has gone to pack the Mitten herbarium which we have just purchased.

With kind regards, believe me,

Sincerely, Olh With British

Mr. J. Franklin Collins,

468 Hope Street,

Providence, R. I.

Dear Mr. Collins:-

The package of mosses collected in Georgia by

H. H. Dartlett has been received. Many thanks. I have examined

No. 907 for Isopterygium micans (Sw.) and believe it is simply a

very slender form of this species which is quite common in our

Southern States and which I have proven to be the same as

Plagiothecium Groutii Cardot & Theriot Bot. Gaz. May 1904. I

suppose you intended these for us.

We leave for Jamaica, West Indies on the 22d for five or six weeks.

Yours sincerely,

El Britton

February 8, 1908

Mrs, M. C. Britton.

Botanical Garden.

Hew Morl City

Dear Mrs. Britton:

You may consider them as a very small instalment towards cancelling the large debt which I owe for your kindness in sending me numerous New England mosses which have been so acceptable within the past two or three years. I have recently enjoyed a few evenings of moss work, and this package is one result. Here will follow, in the more or less remote future, when I have other opportunities for study.

Thank you for your rejort on No. 907.

I hope you will have a fine tri to Jameica. If you happen across any of the forms, varieties, sports, "primary species', atc, of <u>Jolytrichum commune</u>, and have a chance to gather in a few, I hope you will remember that they are just what I am anxious to pet hold of.

Very truly yours,

February 8, 1908.

Aew York Kotanical Garden,

Eronx Yark, New York City.

February 13, 1908.

Prof. J. F. Collins,

Brown University,

Providence, Rhode Island.

My dear Prof. Collins:-

Many thanks for the duplicates received. As far as I know there is no Polytrichum commune in Tropical America and it very unlikely that the species so-called by Mitten (Journ. Linn. Soc. 12: 621. 1869) Weir Nos. 99 & 100 are that species. I am sending duplicates. If you care to go into the question of the West Indian species I can send more! Only P. aristiflorum Mitt. and P. glaucicaule C. Mull. have ever been cited to Jamaica. To you want to see them?

Yours truly,

Pel Brith

Gre. a. G. Britton,

New York City.

My Dear Trs. Britton:

Many thanks for the duelicates from the litten Hergarium (Seir 100). I agree with you that it is in all probability not continue commune, although I gave had no chance to stee it. I feel very reductant about seriously tackling the West Indian colytrich, yet I shall be glad to get specimels of any such as you obtain in duelicate, especially such as may be closely related (if any be found) to 1. commune.

Very trally porre,

Fronx Yark, New York City.

| November | 8th. 3 | 1909. | |

Mr. J. F. Collins,

Providence, Rhode Island.

Dear Mr. Collins:-

Only a common species but it made me realize
that I had not heard from you for a long time. What are you
doing? Where have you been? Are you still studying Folytrichum?

Are you going to help us on North American Flora? We had Dr.

A. LeRoy Andrews here lost summer have for two months on one
of our research scholarships and am rejoiced at the same way
in which he looks at Sphagnums. Fr. Williams also has reduced
all of Kindberg's divegations in Dicranum, And In Singling with Jugar.

Mutumus Michigan Cordially yours,

Mutumus Michigan Cordially yours,

Jan 3, 1910.

Mrs. E.G. Britton,
New York Botanical Garden,
New York City,

My dear Mrs. Britton:-

Your letter came several weeks ago in the midst of a "rush" season with me, and as a result it was mislaid or overlooked until recently. It was then so near the Boston meeting of the A. A. A. E. that I concluded to see you there. At the latter place it almost seems, as I now look back upon it, as if we had mutually agreed to persiste tly dodge each other; at least we could not have succeeded better if we had. I was extremely sorry not to attend the mullivant Society meeting, but I was obliged to be elsewhere that afternoon. I went around to the Nat. Hist. rooms in the a.m. hoping to see you then. I also looked for you at several other meetings in Boston.

Realying to your questions in the letter I would say that I have him deem been working on Polytrichum whenever a little time is available.

From our correspondence of some three years ago I understood that I was expected to do the Polytrichaceae for the N.A. Flora, and have slowly been working along those & lines, though for the past two years I have not found very much time for this particular work.

I judge from your letter that there is some misunderstanding in regard to the matter. Please let me know.

I called at the Garden last sum or and also in '08 to see you, I saw Drs. Murrill, Rydberg, and Andrews last dummer and Dr. Small in '08. If I had known any ahead of the time that I could have visited the Garden I should have written you, but as it was I had to take my chances of finding you.

Very truly yours.

Bronx Yark, New York City.

January 4th, 1910.

Prof. J. Franklin Collins,

Brown University,

Frovidence, R. I.

Dear Mr. Collins: -

completely. I am very glad to hear again from you and to be assured that you are planning to do the Folytrichaceae for North American Flora. No there is no misunderstanding - no one else wants them - but I had not heard from you or sent you any material recently. Mr. Nichols discovery of Fogonatum brachyphyllum at New Haven is very interesting and Frofessor Chamberlain - who was here just before Christmas—told me that he did not believe our North American specimens of Pogonatum alpinum were the same as the European. I have not looked into this question - but it is known to be a variable species.

Let me know if I can be of any help to you.

With best wishes for the New Year,

Sincerely and cordially yours,

Elezabet G. Britan.

mis with the less mind

Jan. 5, 1910

Mrs. E. G. Britton, Botanical Garden, New York City.

My dear Mrs. Britton:-

Thank you for your offer of help on the North American Polytrichaceae. I shall certainly avail myself of the opportunity later, as soon as I understand my own material a little better.

Am glad to hear of Mr. Nichol's discovery of <u>Pogonatum brachyphyllum</u>, and also that Mr. Chamberlain agrees with what I published in Rhodora (8:132) in July, 1906, in regard to <u>Pogonatum alpinum</u>.

With the season's greetings,

Very truly yours,

Mrs. Elizabeth G. Britton,
New York Botanical Garden,
New York City.

My Dear Mrs. Britton:

out what Polytrichum commune var. canadense Kindbe. really is, or if it is anything different from something we lung have known under another name. I have examined specimens labelled this in my own herbarium and also some in the University's herbarium and they all prove to be good genuine P. juniperinum. I wonder if you have anything different. I am strongly tempted to write to Eweden and see if I can set hold of a bit of authentic material, as I suspect there has been a shuffling of labels in Ottawa.

I would also like to ask if you have anything at the Garden in the line of P. Swartzii, or a form of it with strongly squarrose leaves that holds the same relation to this specie that the var. uliginosum does to P. commune. You will understand what I mean by the var. uliginosum when I say that I regard Holzinger's No. 74 as good typical uliginosum. The form of P. Swartzii that I refer to looks like a diminutive uliginosum (about half that size) and slightly branched at base.

Very truly yours,

New York Botanical Garden, Bronx Yark, New York City. July 16th, 1910.

Professor J. F. Collins,

Brown University,

Providence, R. I.

Dear Mr. Collins: -

I am sending the catalogue in separate cover to you, as I promised. You will see by Mr. Maxon's letter that they have selected only eight titles but he does not indicate what they are. I sent off my order and Miss Haynes some time ago but have not yet received the books.

We leave for <u>Cuba</u> again about the middle of August.

Sincerely yours,

Elizabeth Brith

Jet. o LJLU

Ny desa isa Borkland:-

Nour card has just reached me. Iwo days aso I had my first opportunity to look over the Witten catalogue, having returned to the city less than a week prior thereto.

ostly, Nos. 179 and 287. The latter is. I imaging too high priced to consider. There are quite a number of the foreign publications which I do not have, but I cannot invest in these just at present. Bearly all the American ores I already have:

I do not remember that Ors. Britton told me anything about the method of purchase, whether by bidding or by raying a fixed trice which does not appear on the list. Can you inform me?

Very truly yours,

Bronx Yark, New York City.

| Oct. 5th, 19 | 10. |
|--------------|-----|
|--------------|-----|

J. Franklin Collins,

468 Hope Street,

Providence, R. I.

Dear Prof. Collins:-

Miss Mitten fixes the price according to catalogues that she has and they are not unreasonable. I will ask her to let me know the prices of 179 and 287 at once and let you know. The list goes to Dr. Grout now.

We are back from <u>Cuba</u> safe and sound with 1500 more plants to add to our collections which are getting to be quite large from this island.

Cordially yours,

Elizabethy Brita

Eronx Fark, New York City.

Oct. 8th, 1910.

Elizabeth, Brita

Professor J. F. Collins,

468 Hope Street,

Providence, R. I.

Dear Professor Collins:-

Don't you want me to send you a lot of

West Indian duplicates named and unnamed of Polytrichum, etc. Of

course we are all very busy at the beginning of the fall season,

but we all know that you have made a critical study of the family

and I should be pleased to share our material with you.

Sincerely yours,

468 Type Street, rovidhece, T.I. Oct., 10, 1910

Irs. T. J. Britton,

New York Bota ic 1 Garden,

New York City,

m, dear airs. Britton:-

West Indian duplicates as jou may have to spare, and thank you for thinking of me in this regard. I hope no one will expect me to make any studies on them in the immediate future, as it will be almost, if not entirely, impossible for me to find the time to do so this side of Christmas

Very truly yours,

New York Botanical Garden,

Bronx Yark, Hew York City.

Oct. 13th, 1910.

Elizabeth Ruth

Prof. J. Franklin Collins.

468 Hope Street,

Providence, R. I.

Dear Prof. Collins:-

Lillian and I will get together gradually some duplicates of the Polytrichaceae and send them on to you sometime before Christmas, them you cam take your time over them as we shall not reach that group for many months yet.

Sincerely yours,

179 James 1.P. Music 40 # Parallel 1/6 287 Wilkes 25/-

Prof. J. F. Collins,

468 Hope Street,

Providence, R. I.

Dear Prof. Collins: -

Many thanks for the reprints from Rhodora which have reached me to-day. The successful use of corrugated boards will be helpful in certain parts of Cuba where it varies all the time. I have been checking up our specimens of Thilonotis from the Dismier Revision and am tempted to ask you if you can spare specimens of P. americana var. gracilescens Dism. n. var. Commins, no. 4172, Garpe Co. P. 2. Also is he not mistaken in crediting to R. Id. St. Frances (Collins MO. 2367) is it not P. 2? (p. 23). P. caespitosa, P. Id. Collins 2410. P. fallax P. 2, Balde (C.F.& F. 3593). If there are any of ours of which you would like duplicates please let me know as we are putting them in order now. Hiss Hitten sent the enclosed memorandum recently and at last has sent me a priced catalogue.

With best wishes for the New Year,

Sincerely yours,

elizabet ! Button P. S. On separate sheet as memorandum. In putting away the reprints in the library I find that according to our card Index regrints in the library two of your setarates are lacking in our set. If you can

supply them at this late date, we shall be much obliged. They are:

Collins, J. F. Notes on the Bryophytes of Maine. II. Katahdin Mosses. Rhodora 3: 181-184. 10 Je. 1901. Preliminary lists of New England Plants, -XIX. Rhodora 8: 131-135. 28 Jl 1906.

Jan. 17, 1911./ Mrs. J. G. Britton, New Mor't official Garden, Hew York (it). Dear Art. Orition: -Yours of perturday's date is at hand. sending under two accurate covers both reprints and seedinens of all the mosses you mentioned. You would have received the latter later in any event. I had no duplicate of No. 2410, so I abstracted a piece from my own berbarium for you. In regard to No. 2367 Dismier has made a blunder. The only two specimens which he named 1. a ericana were collected in Maine. I send you specimens of each. Probably he took the Mh. I." from after my name at the top of the label (see label of 2367.) It has never seemed necessary to insert "Taine" after the locality where that word is printed to prominently at the top of the label, but I can easily see where a foreigner might be misled by a eastom which is so penerally understoom in the country. In regard to the litten fampliets; if I understand the figures to mean shillings and pence as follows. 179. James: Tusci of the 40th parallel, one shilling, six pence. 237(or is it 287?) Vilkes expedition, twenty-five shillings. I should like both of them. If it is necessary, or advisable, for me to write direct to Miss Mitten please advise me promptly of her address and I will communicate with her at once. Perhaps you are acting somewhat in the nature of her agent in this country. I tope if you learn of other mosses or reprints that you would like that you will let me 'mow. If I have duplicates I shall be only too glad to supply your wants. Vory truly yours,

New York Botanical Garden, Bronx Yark, New York City.

Jan, 18, 1911.

Frof. J. Franklin Collins,

468 Hope Street,

Providence, R. I.

Dear Prof. Collins:-

Many thanks for your prompt and generous reply to my request for specimens. Dont you want some of ours? Yes, I have made a lot of corrections in our copy and will send the list to you as soon as Prof. Chamberlain returns it! He is translating the keys and I have written a critical revision. I will send your order to Miss Mitten at once, Yes, I have tried to help them dispose of their father's books and pamphlets.

Cordially yours,

Derahat G. Bith

Jan. 20, 1911

Mrs. D. G. Britton,
Botnaical Garden,
New York City.

Dear Mrs. Britton:-

I should be very glad to see a list of the Dismier corrections as soon as you get the list back from Chamberlain, if you can spare it temporarily.

Prof. J. Franklin Collins,

468 Hope Street,

Providence, R. I.

Dear Frof. Collins:-

Prof. Chamberlain who was here last Saturday and he tells me that he is going up to see you on Lincoln's or Washington's Birthday and will take his copy along. I meant any species of Philonotis! as listed by Dismier that might be lacking in your collections. I also told Mr. Chamberlain that I wished he could persuade you to come here next summer for a month or more on one of our research scholarships to study and put our collection of Pogonatum and Folytrichum in order. They are worth \$50. and Dr. Le Roy Andrews will be here in July and Dr. Arthur and Dr. Kern have been here several times. It would enable us to get a better understanding of the family than we have now. Mull the Month.

Sincerely yours,

Elizabeth & Within

29 Jan. 1911

My dear Mrs. Britton:-

Yours of the 23d duly received.

I have looked over my specimens fo Philonotis and find I lack the following species and varieties listed by Dismier. My list of what I lack is longer than what I have. I f you have any duplicates of any listed below I would be very glad to get a bit of any of them.

The following species and varieties not in Herb. J.F.C.

P. radicalis; have one Fla. specimen mk only (Holzinger's No.94) gracillima sphaerocarpa; no U.S. specimens. tenella; none of the varieties. uncinata, nor any variety. crysoblasta Marchica; not a specimen from anywhere!! seriata tomentwlla, nor any variety caespitosa; none of the varieties. capillaris; no U.S. specimen.

None of the S. American species.

I expect Mr. Chamberlain here over Sunday, two weeks from today, when we shallprobably go over the corrections, etc.

Very truly yours,

New York Botanical Garden,

Bronx Yark, **Aew Jork City.**

Prof. J. Franklin Collins,

468 Hope Street,

Providence, R. I.

Dear Frof. Collins:-

Yours of January 29th has awaited a chance to pick out <u>duplicates</u> of <u>Philonotis</u>. We are sending <u>18 specimens</u> of the <u>ll species</u> and hope they will be welcome. I also want to offer you a set of mosses collected in <u>Maine by Percy Wilson</u> which I have not taken the time to study. Do you want them sent to you?

We leave for Cuba on Saturday, Feb. 18th.

Cordially yours,

Elizabet G. Pritta

Feb. 18, 1911.

My dear Mrs. Britton:-

of Philonotis which came afew days ago. In regard to the Maine mosses would say that I should be gaad to set any, provided it does not involve naming them. I am trying to narrow my moss work, as time for the work is so limited? to working almost entirely on the Polytrichums.

Very truly yours,

New York Botanical Garden,

Fronx Park, Hew York City.

July 25, 1911.

Elizabeth G. Britten

Prof. J. Franklin Colling,

468 Hope Street,

Providence, R. I.

Dear Prof. Collins:-

we promised to send you duplicates of <u>Polytrichum</u> etc. from the <u>W. I.</u> last year and did not get around to it. Am hoping that Lillian will find time to get the duplicates for you soon. Meanwhile, I wonder if you could not plan to come here on one of our scholarships next year, and do some work for <u>North American Plora? Dr. Andrews</u> is here this summer working on <u>Pottiaceae</u>.

Sincerely yours,

468 Hope Street, Providence, R.I. 15 Oct. 1911

My dear Mrs. Britton:-

I have been out of town most of the time since June, and for this reason, probably, your letter of the 25th of July failed to reach me until I returned to Providence a few days ago.

You probably know before this that I have resigned my position in Brown University in order to accept a position in the Bureau of Plant Industry in Washington. My permanent addréss will be, as heretofore, the Providence address given at the top of this sheet, although in the summertime I expect to be in the field most of the time. For this reason the chances of my being able to arrange to take one of the scholarships that you mention are not very favorable, though by no means out of the question, so far as I can see now.

I am still following up the Polytricha as my avocation, and I am hoping that I shall have more time for the work when I am in Providence than I have had for several years past; it could not very well be less.

Hoping you have had a pleasant and profitable summer, I remain very truly,

I was in New York some little time ago. As my time was rather limited and I was told that you were in Europe, I did not attempt to get up to the garden.

New York Botanical Garden,

Bronx Fark, Hew York City.

Nov. 14, 1911.

Prof. J. Franklin Collins,

468 Hope Street,

Providence, R. I.

Dear Mr. Collins: -

No. 4 of the Josselyn Bot. Soc. with your Key to Polytrichum is received. Many thanks! I have still in mind to send you some duplicates of all of ours but we keep pretty busy and just now Lillian is type-writing for N. A. Flora, but I do intend to send them to you and there are several interesting problems among the West Indian ones which I am sure you will enjoy.

Sincerely yours,

El. Butta

Prof. J. Franklin Collins,

468 Hope Street,

Providence, R. I.

Dear Mr. Collins:-

We are getting ready to print the first part of Volume 15 of N. A. Flora and I am asking favors of those who are likely to have specimens from other places than we have. Can you give me any extensions of ranges of the same species that I asked Prof. Chamberlain about. I enclose his letter and two duplicates of New England stations for rare species. The Polytrichaceae do not come in till the end of Part 4 of Vol. 15 so there is no hurry, but if at any time you wish to come here on one of our "Research Scholarships" for a month, please let me know and it can be arranged.

With best wishes for the New Year,

Sincerely yours,

Elizahta & Britan

23 Jan. 1912

My dear Mrs. Britton:-

Providence, was forwarded to me in Washington where I have been since the middle of December, until within 48 hours. I have just had opportunity to look up the records that I have of the species mentioned in the letter to Mr. Chamberlain (which I return herewith). I fear that I can add little, if anything, of interest to what has already been indicated, but as I am uncertain in several cases I indicate below what may be of interest, although I think you must already know of all of them.

Archidium ohioense. Quebec, in Macouns Cat. 6:12.

Jan. 8, 1910

Miss C. H. Carr, R. F. D. No. 3, South Framingham, Mass.

My dear Miss Carr :-

I am in no special hurry for the Polytrichum specimens; whenever you can get at them in the speing. I am very much interested in the Hair-caps, and have been studying them for some years. I guess it will require some more years of study before I can really know much about them. I would be very glad to get hold of any and all forms of Polytrichums. openatums, and Catharinaeas in your region, as I am working on ax the order Folytrichaceae for the North American Flora which is being issued by the New York Botanical Garden. I am sending you a few pamphlets along this line which may be of interest to you.

Very truly jours,

Sudburg Jan 13-1910 My dear Mr Collins, Thank sin for the pamphlets which arrived Gestudas. I might have known from the own observation that L'emmune was quite veriable but I was not owner that Breologists were willing to acknowledge av mang varieties, No wonder for are wanting more bears, and I mught add, more places, for Hour, eap stude, I vers much hope that I shall be able to collect spremens for you, get dare make no nimeses. I am an old woman with much to do at the time of seas best mitet for met collection, so

it is quite possible I may not be Equal to giving enough time be of any real service. Dooking ever sur list I was particularly interested to observe that Catherinaea erispa was erediled to no N. E. slat except our our. Then later I found that Maine and Connectient had lach et least one claim aprice to it Several gears ago an old ditet on our farm was cleared out and somewhat observed. The first noticeable growth of one amount to ever the bare oldes was a mors which proved to be Catherinaea crispa. Not in mere patether but living long spaces. Mrs M. So. Stevens has viriled this part-of Suddong weras times to go with me for morses

and lichers. It must have been the next-to her last virit that The avas able to abtorin good fully specimens at the childs though even then the grass had leighn to ohoke the mors. thobable it was the some sear or the next that the little patethes still lift, fruited so fred that several members of the . Mars Cehaples had fine specimens. It was disered as an offering" but there was not enough. Least sear was too dre for a mers which fruits so late and not a good looking sheemin of fruit could I find Since it has become so hidden by the gears that it often homes own some of the best of it like a veil 9 have wondered much if Catherinaea cripa was not

much more common than has been supposed. Hidden as ous is now, one avoiled hardle diseaver it with no previous knowledge of its existence. If son are ahead well porter on "The hicks ome The mounters" of this particular mors, the Rambling account given above will be of little interest about mussis, chiefly consists in where 30 and how a few of them are 3 found. ment af there at-sight. most of there as signi.

I did not with you to suppose
that I was a real brealagest."

Merely an assistant to my betters in That ling. Heare exeure the length of this. I An answer is not necessary of Jews truly Co. M. Can.

P.O. address Mis E.M. Can South Thomingham R.J.D. X3 Mass Part J. Franklin Collins Dear Sin; Dike all our other plants the jurifier and awned hairely one developing early I had an appalunite to oblain some of the most forward Satinday (234) and although I com not certain that som cove to even look at eller I am unding them. The little bunch of fluncher was sprinkled in owners a much longer quantité of Penimenne With it, is a little of the latter which shows with how much it is behind the junifier.

There were all collected in ohn spaces oming think oaks. Some halther of Perumene of the kind which shrends In old partines are the most forward I have get seen. I still hope to be able to and gen some havicales if hen have not alreade Solowied all gen word.
Do zu with fin the common how cap as it zeurs in varying conditions! Some like the two mintimed above and some from sovernsto and their Cordus etc. Do son also with for the other hancalis? Instead of puring them would the be as acceptate fresh? I ceuld express a grantity in early Juny, Luns think toll. Can. 1. ucu. Hiss Carr:-

Thank you for the "raincaps" which came in aue season. I would be glad to get specimens of the common species if you have a good opportunity to collect them when they are in good condition.

Erroh specimens will be satisfactory if that is the most convenient way for you to send them, but after the first of June you had better let them dry before you send them, as I expect to be away most of the time from early June to the middle of September, and things sent during that time might remain in the wrappers until I reach home again. First class mail matter will, however, be forwarded.

Very truly yours,

The barket of mors is to be unt by prepaid express in a day n two Budburg Mag 25-1910 My dear Mr Collins Thomk gen for humiting me to send your hancaks" fresh. Me live in "messes" are aft to be in the was. Buides I did not both present and collecting. I begun to label, then was That labelled Whit meaders comes from our own farm; though now smewhal-thaded on the south, it did not me to be and hubable the hancah greed there when it was whitte an open meadow.

Utc live a mile north of the Wagsed Inn. About half was there, portions of old partines on each rieb of the road are being overrun with common havicah. Each hatch with a bught green burder thowing has it is gaining gunnd. On the higher quind the soil is so how that bare sond often thous. The level ground if not much better is bt-leart less dis. On this are little mounds of hancah looking as if elevated on the dead plants of more years. The parcels teed in brown hapen came from there parties. The ranker growth from the little mounds, the hhortest from the highest gund. Thre in while show on as pon gumd among shrub oaks

and gung white oaks. I had some from there fairly well funited but must have misplaced it. I feel prette sure that the packet wasphed in three colors is it, as it has a trace of lichnis among it A mily or or last of us is a small swamp containing a little of the remkest Patricla mean per. I enclosed one hondful. The swamp is bogge but notwholly a sphagherm sevamp, as other mines occupy the larger space. I could find but little of the common houseals genoing as low down as some of the shicking none of it-was finited gathered

some of the instruited. Then as you will see I found some well finited long enough to be mixed with sphlenum. The like the shicter are hacked in blue-seen haper. On the banks of this swamp giows that in pink paper. I supposed that sout to sou by Mrs How of Worcetter Come from this border moss. Presume it will have to be The same as that in the mony wiel. It is also very persible that all coming from sterile whends will prive alike receiving tur varieties. It later on Im com give me some information please de w. Lours trul la l. Can.

Miss C. M. Carr, R. D. 3, South Framingham, Mass

My dear Miss Carr:-

Thank you very much for the mosses which came safely yesterday. I have already got them in press and I feel sure that some of them will prove interesting when I get a chance in the fall (I hope) to examine them carefully.

I greatly appreciate your kindness in sending them.

Very truly yours,

P.O. address Miss C. M. Can So Thomingham. Mars R. J. D. V. 3 Dudbury 1/0 17-1911 Rofesson V. A. Collins Dear Sir In unding me a copy of the Bulletin of the Josselyn Botomical Society. Will you please lett me if all the Polyhichum commune sent from here proved to be the variety pinginiale. Juns trutz Carr.

468 Hope Street, Providence, R.I.

20 Nov. 1911

Miss C. M. Carr, So. Framingham, Mass.

My dear Miss Carr :-

I have not yet had ag chance to go over you mosses that You sent me in May 1910 critically, so I cannot say with certainty as to just what I should call the several forms that you sent me of the Polytrichum commune group . I am quite sure, however, that none of them is typical P. commune. I am also quite sure that nearly all of the commune forms that you sent are the var. perigoniale. As I recall the specimens there are two tall ones (perhaps three) that look, off hand, as if they might be something a little different. I had hoped to have time to study them before this. Will report later.

Mr bolling, Dear Dir; -It gives me pleance to send the Waissia, and since you do not care for the lichen, I enclose bits of the rock-growing species, which though probably Jamilian to you, you may like to have from a new locality. a mistake in regard To the collecting in Laconia, as our Cittle City on the Laker does not Junish as fine collecting ground as does the neighboring lown of Gilford with Its hills and mountains Insting that the specs will please. I am - Very Respectfully - I Lance A. Carter.

Feb 27 th 1905, Mr J. F. Collins, Dear Die;-It gives me pleasure to send you my mosses, but I regret that the speci are not of the very best, as I have had so many applications for my offering, my supply of fruited speed a nearly exhausted, I will enclose a few bite of He chilatatum which grew upon the rocks also in the Jame rooneleeful brook, but I had not enough for a general offering, I think you may be interested in the extension of range of this most, Very Respectfully -Lama A. Carter,

LHG

Trof J. F. Collins, Dear Dir; -Please accept my hearty thanks for the beautiful Specimen of Paluelella synanosa which you so kindly sent me, I shall prize it highly always, I enclose a little of two dolytrichunk and perhaps I may be able to collect more if The Snow melts away, they are very abundant out in the country about here. Very Respect July-37 Ehnsch St. Lance A. Carter, Laconice Nille Nov 19th 1906,
